

Industrial & Telescopic Fork Lift **2 – 5 day** course

The duration of these courses ranges from 2 – 5 days, depending upon the experience of the operator. An experienced operator would require a 2 day course and those with little or no experience would require between 3 and 5 days training. If the trainee has very little experience with a fork lift but is a car and / or a tractor driver, he would probably be able to reach the required standard within 3 days.

Course outline

- the essential features of lift trucks and their maintenance
- how to avoid the potential dangers of lift truck operation
- how to assess loads and move them safely
- how to get the best from your truck in different conditions
- the relevant legal requirements

Training is a legal requirement.

The Provision & Use of Work Equipment Regulations 1998 (PUWER) require employers to ensure that lift trucks are operated only by employees who have received appropriate training and assessments in accordance with the Code of Practice for lift trucks laid down by the Health & Safety Commission.

Upon successful completion of the course and meeting the required standard, candidates are awarded a Lantra integrated training and assessment certificate.

A 1-Day refresher is also available for those who hold a current certificate.
